

SOBO POWER

	Bacteria cultures	Solvents	Water-based	Tarmac / asphalt surfaces	Concrete surfaces	Plastic and other surfaces	"Fresh" oil	"Old" oil	Dilution	pH value at 1:1	Concentration	What kind of oil?
			X			X	X		1:200 bis 1:25	12	0,5% bis 4%	Fuel, diesel, heating oil, engine oil, gearbox oil, hydraulic oil etc.
Specification:	Sobo Power is a non-bacterial active, all-purpose cleaner. Sobo Power removes effectively contamination on washable surfaces like plastic, metal, wood, textiles etc. At a recommended dosage of 0,5-4% this product removes light and medium "fresh" contamination very quickly. Generally, a higher dosage than the recommended one is possible and, depending on intensity of the contamination, should be tested. Sobo Power is an alkaline surface cleaner without bacterial effect and therefore achieves no deep cleaning action on porous surfaces.											
Application:	Apply Sobo Power evenly by cloth or directly to the contaminated surface (spray). Wipe clean with a conventional cloth. When the product is used for large surfaces, apply Sobo Power directly to the contaminated surface via technical equipment like pressure cleaner, steam cleaner and other cleaning equipment at the recommended dilution ratio of 1:25. The addition of warm water can improve and accelerate the results. Absorb contaminated liquid by using conventional products or soak-up machines. Dispose of according to regulations.
